## Plus 8 Brakes

### Plus 8 1968-78 Models

The early cars with the 15" x 5.5" wide wheels and the 14" 'Millrace' wheels. These use the Girling M16 caliper. These are 2 piston with relatively small pad areas. Unless you are seeking originality, there is not a lot that can be done with these calipers.

Consider having them overhauled with new seals and pistons. If originality is secondary to stopping the car, then we would replace the standard calipers with the Billet 4 calipers. These have approximately 25% larger pad area than standard.

With the internal shape of these wheels, there is not enough clearance for using a larger diameter rotor.

If you have the later factory 6.5" x 15" wheels, these have a totally different internal construction, then the larger diameter rotors will clear.

For normal road use, we would just replace the calipers with the more efficient Billet 4, and retain the stock rotors, Billet 4 calipers, brake pads and Aeroquip hoses

**INQUIRE TOLL FREE AT 888-345-6647**

### Product Options

We can offer a disc upgrade, using a 280 x 22mm heavy duty vented rotor. These will fit with the same Billet 4 calipers.

These rotors are virtually the same diameter as standard.

The vented rotors will dissipate the heat from heavy braking, where the standard rotor would overheat and lead to brake fade. (These rotors have been homologated for Group 4 FIA use.)

Vented Discs, Billet 4 Calipers, brake pads, aeroquip hoses and all bolts

## Plus 8 Brakes

### Plus 8 Front brakes 1981 to 1992

These fit when the later wheels of 6.1/2" wide 15" Diameter are installed. The ideal kit, as wider tyres have more grip for braking. Using the 300mm x 22mm ventilated rotors as in the later kits, with the aluminium billet 4 calipers.

Complete kit with all the installation hardware, mounting brackets, including brake pads and aeroquip hoses.

We can also offer a pair of replacement aluminium 4 piston calipers to suit the standard discs, should you not wish to change the discs

**INQUIRE TOLL FREE AT 888-345-6647**

#### Product Options

The rotors are normally supplied plain faced. Otherwise, if you do not need the extra braking, as you are a conscientious driver, and your existing calipers have seen enough service, there are still options.

Crossdrilling or grooving is an additional per pair

Aeroquip braided steel brake hoses for front hoses only including the rear hose

## Plus 8 Brakes

### Plus 8 Front Brakes 1992 on

The most popular upgrade for these is the 300mm vented conversion. These discs are 22mm thick and for everyday road use will give all the braking performance needed.

A pair of 300mm ventilated discs, mounted to machined aluminium mounting bells, a set of custom made spacers for the calipers, a pair of new special caliper mounting brackets, and all the hardware to assemble.

As the calipers on some of these cars are now getting on for 20+ years old we can also offer a complete replacement front brake upgrade.

Consisting of the same 2 piece vented disc as above but with a pair of aluminium 4 piston calipers, brake pads and all necessary fittings

As supplied to the Morgan factory for the "Baby Doll" limited editions.

Alloy Wheel Cars

Wire Wheel Cars

Complete replacement front brake upgrade

## Plus 8 Brakes

### 1978-1981 +8 Front Brakes

These cars were fitted from the factory with the Millrace 6Jx14 wheel. Unfortunately these do not have sufficient clearance for our 300mm diameter vented disc kit.

However we can offer a smaller 280mm diameter by 22mm thick vented disc along with the Billet 4 Aluminium 4 piston Caliper
